Possible 311 Action at Lee's Lane Landfill
Louisville, Kentucky

Life Scientist
Disposal Site Unit

Allen Bartlett
Environmental Emergency Branch

I have received information from the state that Lee's Lane Landfill may be a candidate for 311 action in the near future.

The landfill presently has exposed drums of suspected hazardous wastes which are situated below the spring high water mark of the Ohio River. The state has notified the Coast Guard who in turn promised them a five day warning before the high water reaches the drums. The state is presently attempting to resolve the situation before a crisis develops but did indicate that 311 action may be necessary.

I feel this situation should be brought to your attention before an imminent hazard develops.
